We also having a spacious warehouse that enables us to meet the bulk demand of our clients within the committed to time frame. Furthermore, we also keep ourselves updated with industry standards to meet the exact requirement of our clients in the best possible.

## Hex Head Cap Bolt Hex Nuts

A **hex bolt**, also known as a hex cap screw or machine bolt, has a 6 sided, hexagonal head and machine threads intended to be used in conjunction with a **Hex nut**.

## Socket Head Cap Screws Button Head Socket Screws

A **socket head cap screw**, also known as a socket cap screw, socket screw or Allen bolt, is a type of cap screw with a cylindrical head and hexagonal drive hole. **Button Head Socket screw** also known as socket button screw or socket button bolt with a round head socket head button screw.

## Shoulder Screws Flat Head Socket Screws

Shoulder Screws also called Stripper Bolts or **Shoulder Bolts**. These bolts have a thick shoulder that runs almost the entire length of the shaft with only about 20% or less than that. **Flat Head Socket Screws** have an Allen wrench drive and a small cylindrical head with tall vertical sides.

## Square Head Cap Screws Threaded Rods

**Square Head Bolts** are externally threaded fasteners, generally made from carbon steel. They have square shaped external wrenching head.

A **Threaded rod**, also known as a stud, is a relatively long rod that is threaded on both ends; the thread may extend along the complete length of the rod. They are designed to be used intension. Threaded rod in bar stock form is often called all-thread.

There are two types of studs: *full-bodied* studs, and *undercut* studs. Full-bodied studs have a shank equal to the major diameter of the thread. Undercut studs have a shank equal to the pitch diameter of the screw thread.

## Foundation Bolt

## Anchor Bolt

**Foundation bolts** and Threaded rod can be used for so many different applications--large and small. It can be used with standard nuts and washers. They may be used in standard stock lengths or cut to the length required. These pre-threaded bars may be cut to length with a metal cutting hacksaw or power band saw.

There are types of Foundation Bolt: J- Bolt, U- Bolt, and L- Bolt. **Foundation bolts are used** in the building, construction, and metal structures, such as building columns, posts, street lighting, traffic signals, highway signs, and porch and deck supports in concrete and footings.

An **Anchor bolt** is used to attach objects or structures to concrete. There are many types of anchor bolts, consisting of designs that are mostly proprietary to the manufacturing companies. All consist of a threaded end, to which a nut and washer can be attached for the external load. Anchor bolts are extensively used on all types of projects, from standard buildings to dams and nuclear power plants. They can also be used to firmly affix embed plates to a concrete foundation when used with a structural steel element.

**Shree Ram Enterprise** is the one-stop solution for all your Fasteners, Nuts, Bolts, Screws, Foundation Bolt, Anchor Bolt Studs, etc. Based in Vadodara city of Gujarat, the company majorly deals in a comprehensive range of Nuts & Bolts all across the Gujarat.
